

## **What's New in KairosDonor 8.29?**

Since the release of Version 8.27 we continue to find small issues that require changes. Most of these fixes are all hidden "behind the scenes".

We have also added several enhancements that the End User will see.

### **Gifts in Kind**

We simplified the wording for the "GIK Receipt and Voucher" button in the "Team Meeting" section.

### **Policy & Accounting**

We updated the Financial Policy and Practices Manual to the current version and added a button for the Financial Job Descriptions.

### **QuickBooks Out**

We added coding that prevents the exporting of transactions from a year that has been closed and that requires the user to select the proper year for the export, particularly during the transition period January and February of the year following the current "Processing Year". In January 2015 when the "Processing Year" is still 2014 the program will ask you to specify the year for the export. These provisions were added to overcome a challenge with QuickBooks when QuickBooks accepted an import of data into a "Closed" period.

The path name for the "Custom Location" was lengthened from 150 characters to 255 characters to allow for very long folder names and very deep folders.

The account and class entries in the IIF File for an NSF check were corrected to be in compliance with the current Chart of Accounts and Class structure.
